Key Features

Business Architecture of Cloud Phone

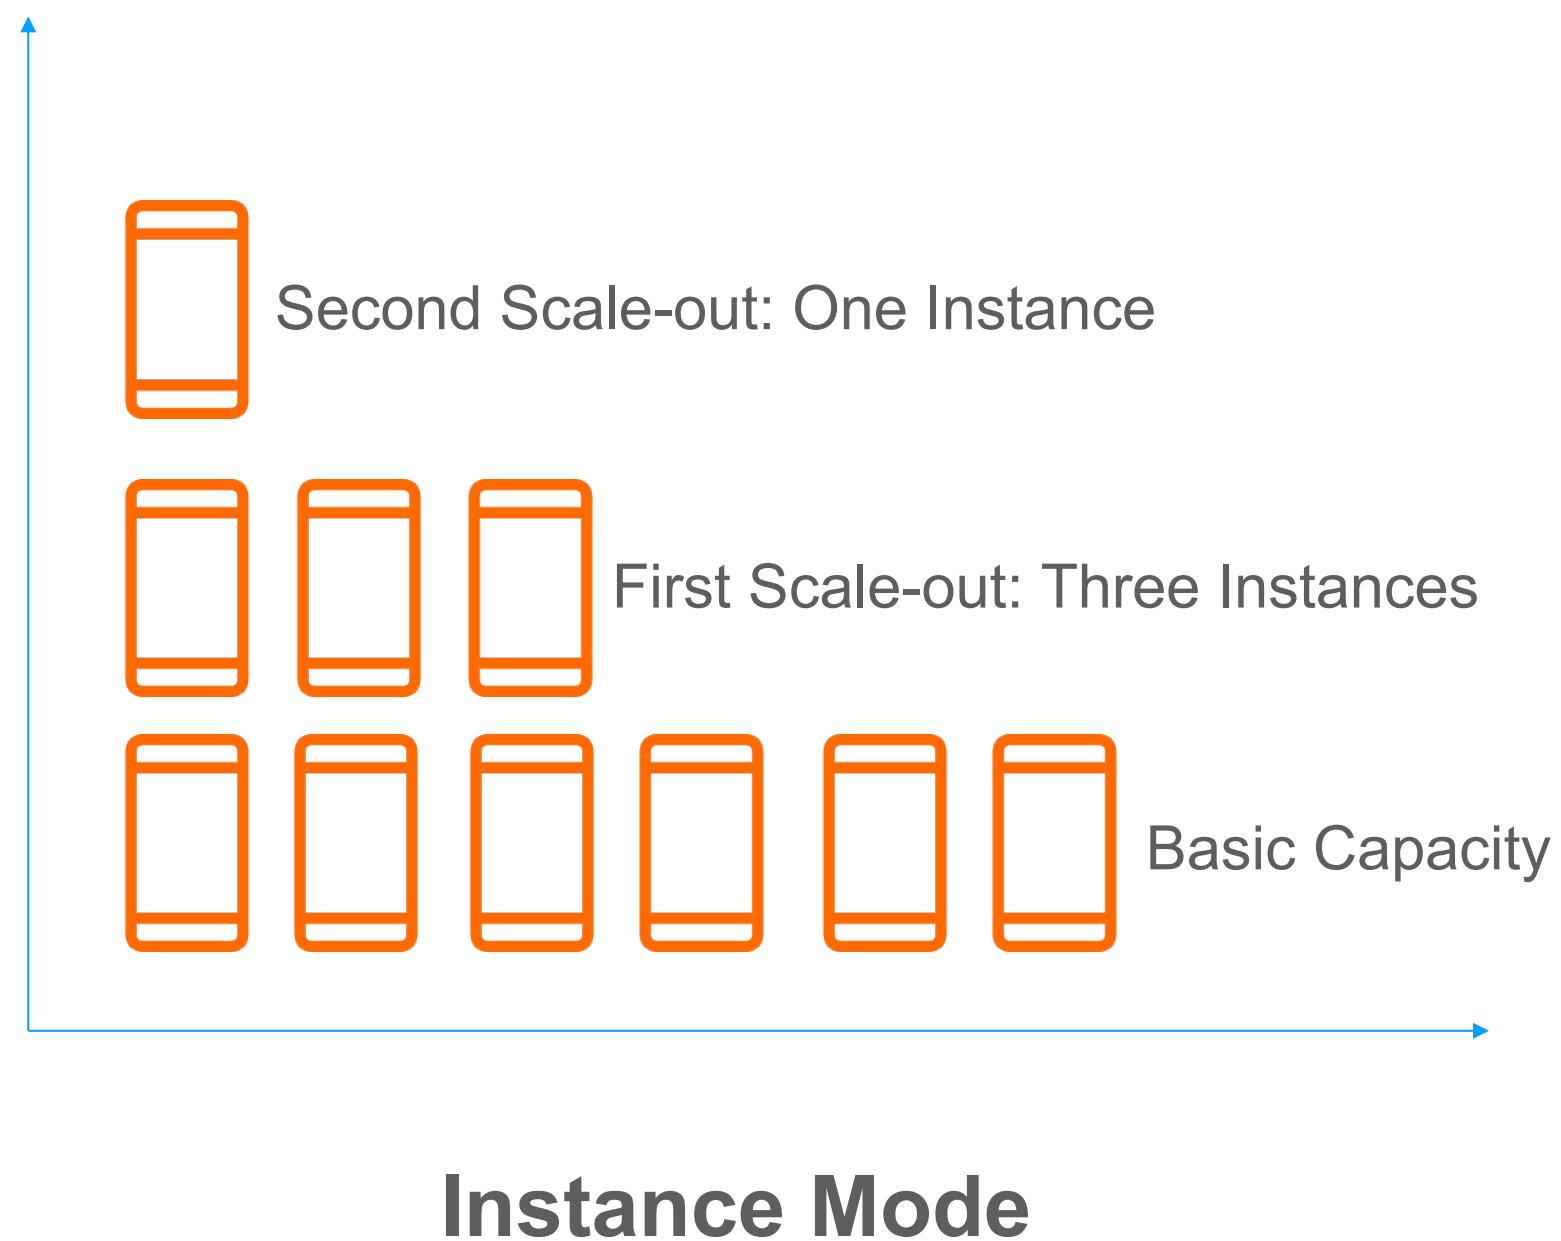

The Cloud Phone resource pool is built based on Alibaba Cloud, providing a variety of interactive modes to support implementation in scenarios such as community operations, cross-border e-commerce, cloud gaming, AI live streaming, smart terminals, and software testing.

Sales Forms of Cloud Phone

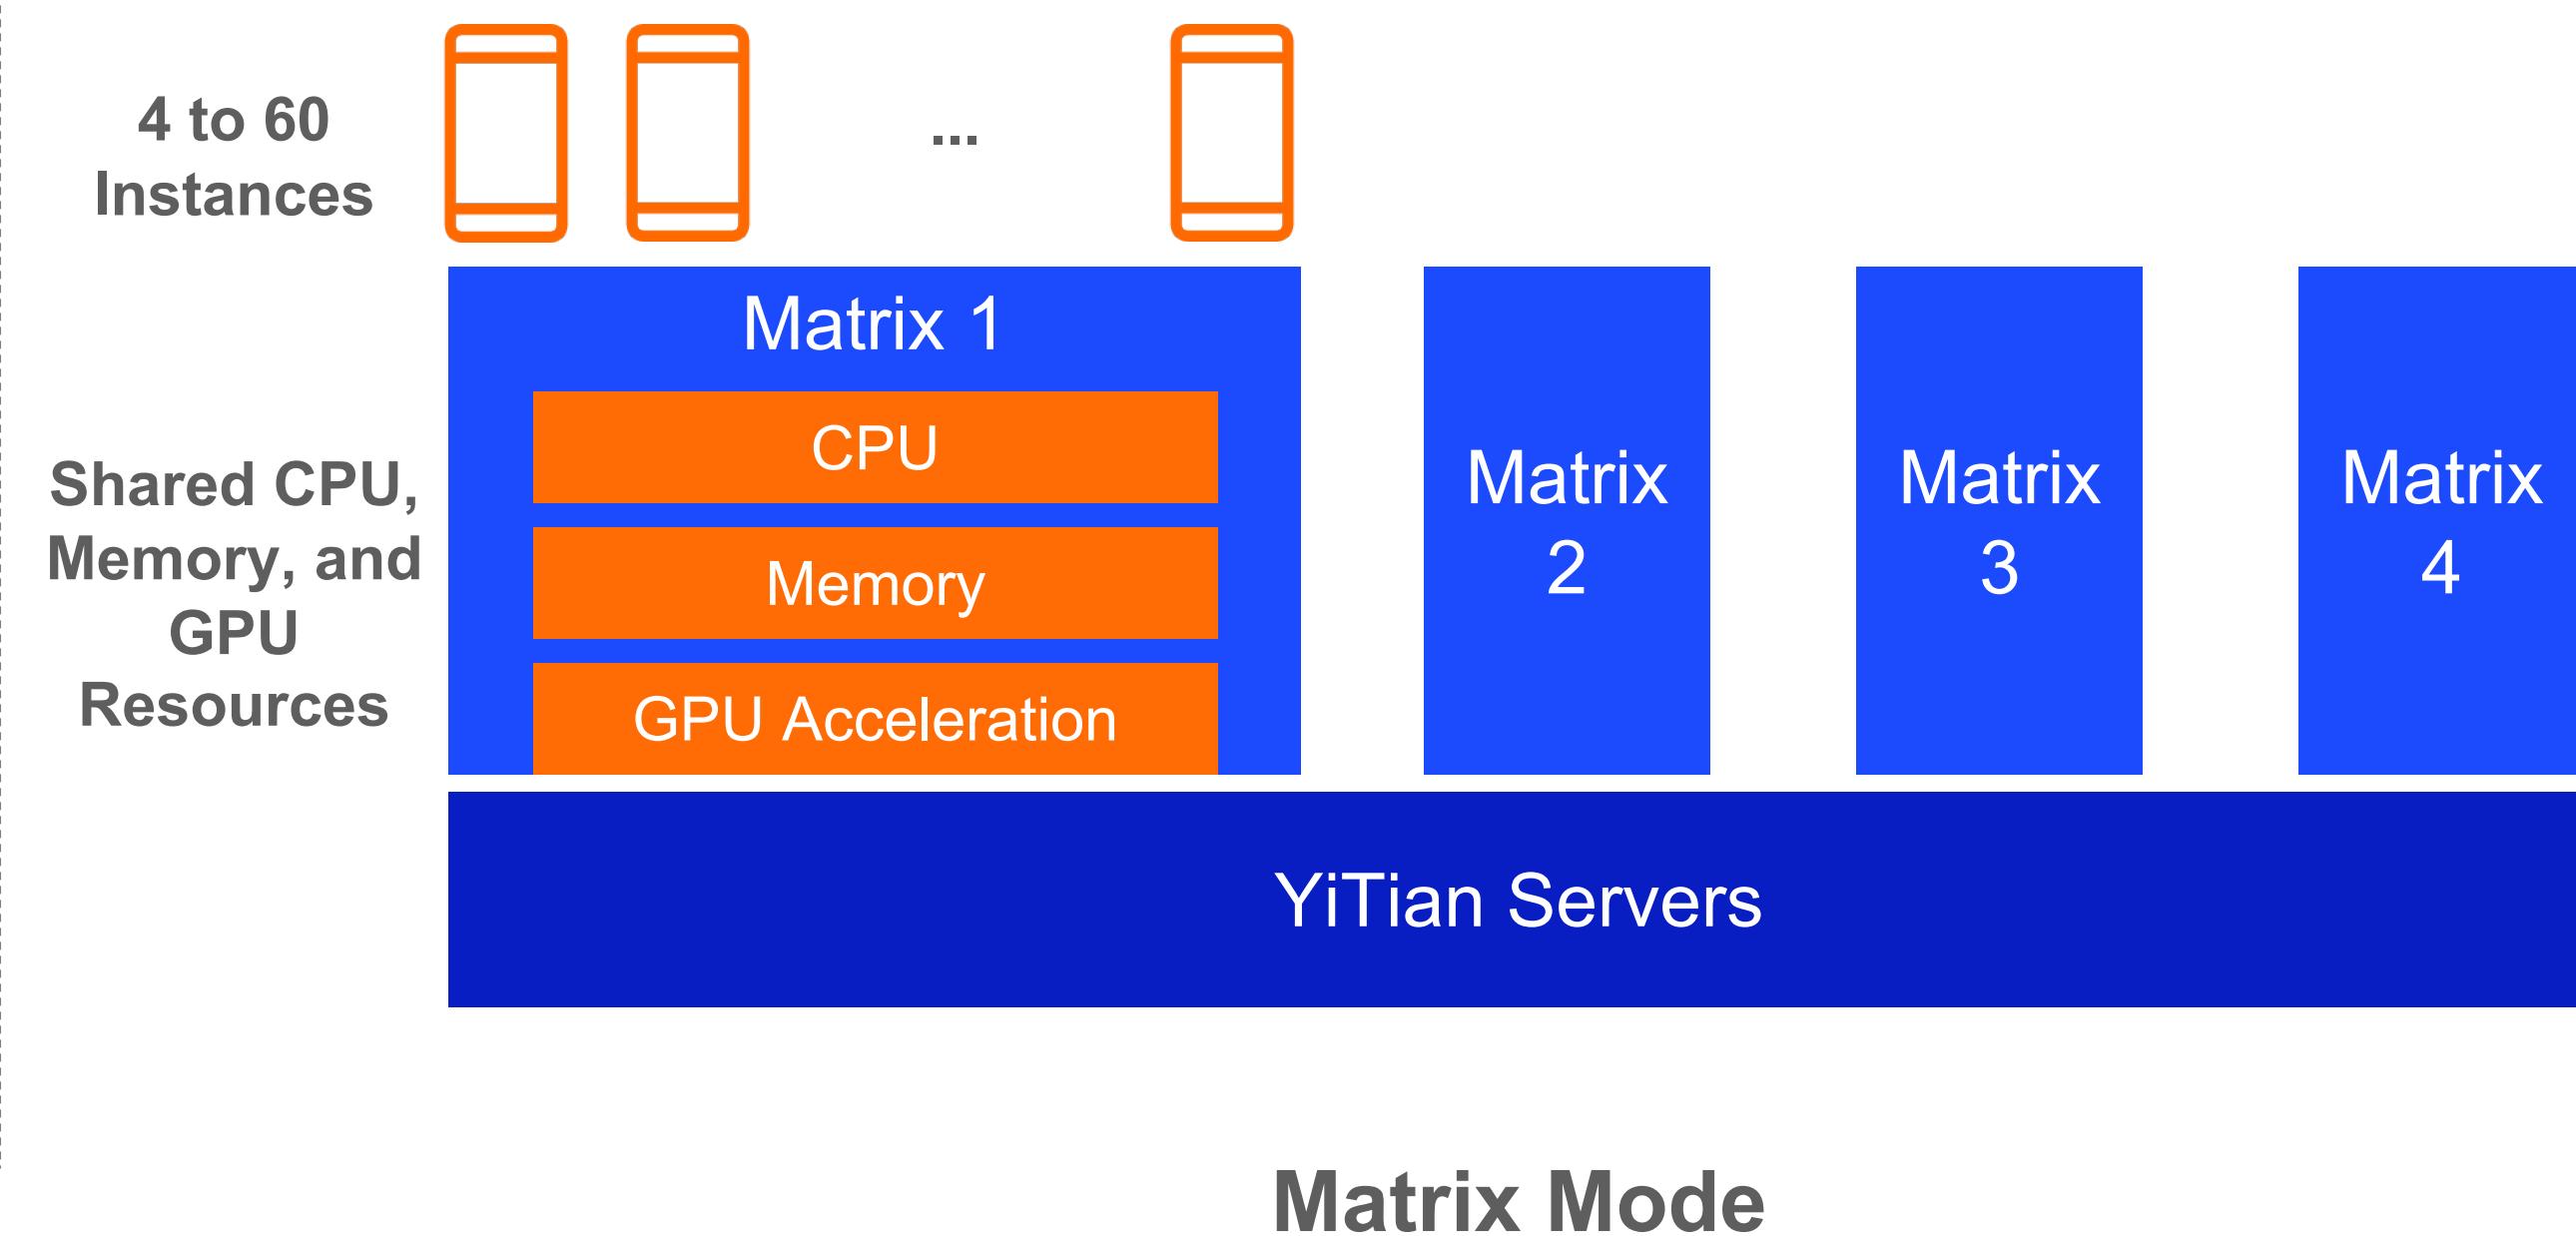

Cloud Phone instance: allows you to scale out instances. The minimum specifications of an instance are 2 CPU cores and 4 GB of memory.

On-demand billing: supports subscription and pay-as-you-go to flexibly adapt to business scenarios.

Cloud Phone matrix: allows you to purchase instances by matrix. Each matrix contains a total of 40 CPU cores and 120 GB of memory.

Subscription: supports 4 to 60 instances. The number of instances per matrix can be selected based on actual loads.

Key Features

Key Features of Cloud Phone

- Globally Distributed Infrastructure
- Cluster Management to Improve Operational Efficiency

- Network Redirection and Flexible IP Configurations
- Real Device Simulation

Easy to Use: Globally Distributed Infrastructure

阿里云智能集团
ALIBABA CLOUD INTELLIGENCE GROUP

无影

Cloud Phone supports the following regions: China (Hangzhou), China (Shanghai), China (Beijing), China (Shenzhen), **Singapore**, **China (Hong Kong)**, and **Germany (Frankfurt)**. As business expands, Cloud Phone will gradually become available in other regions.

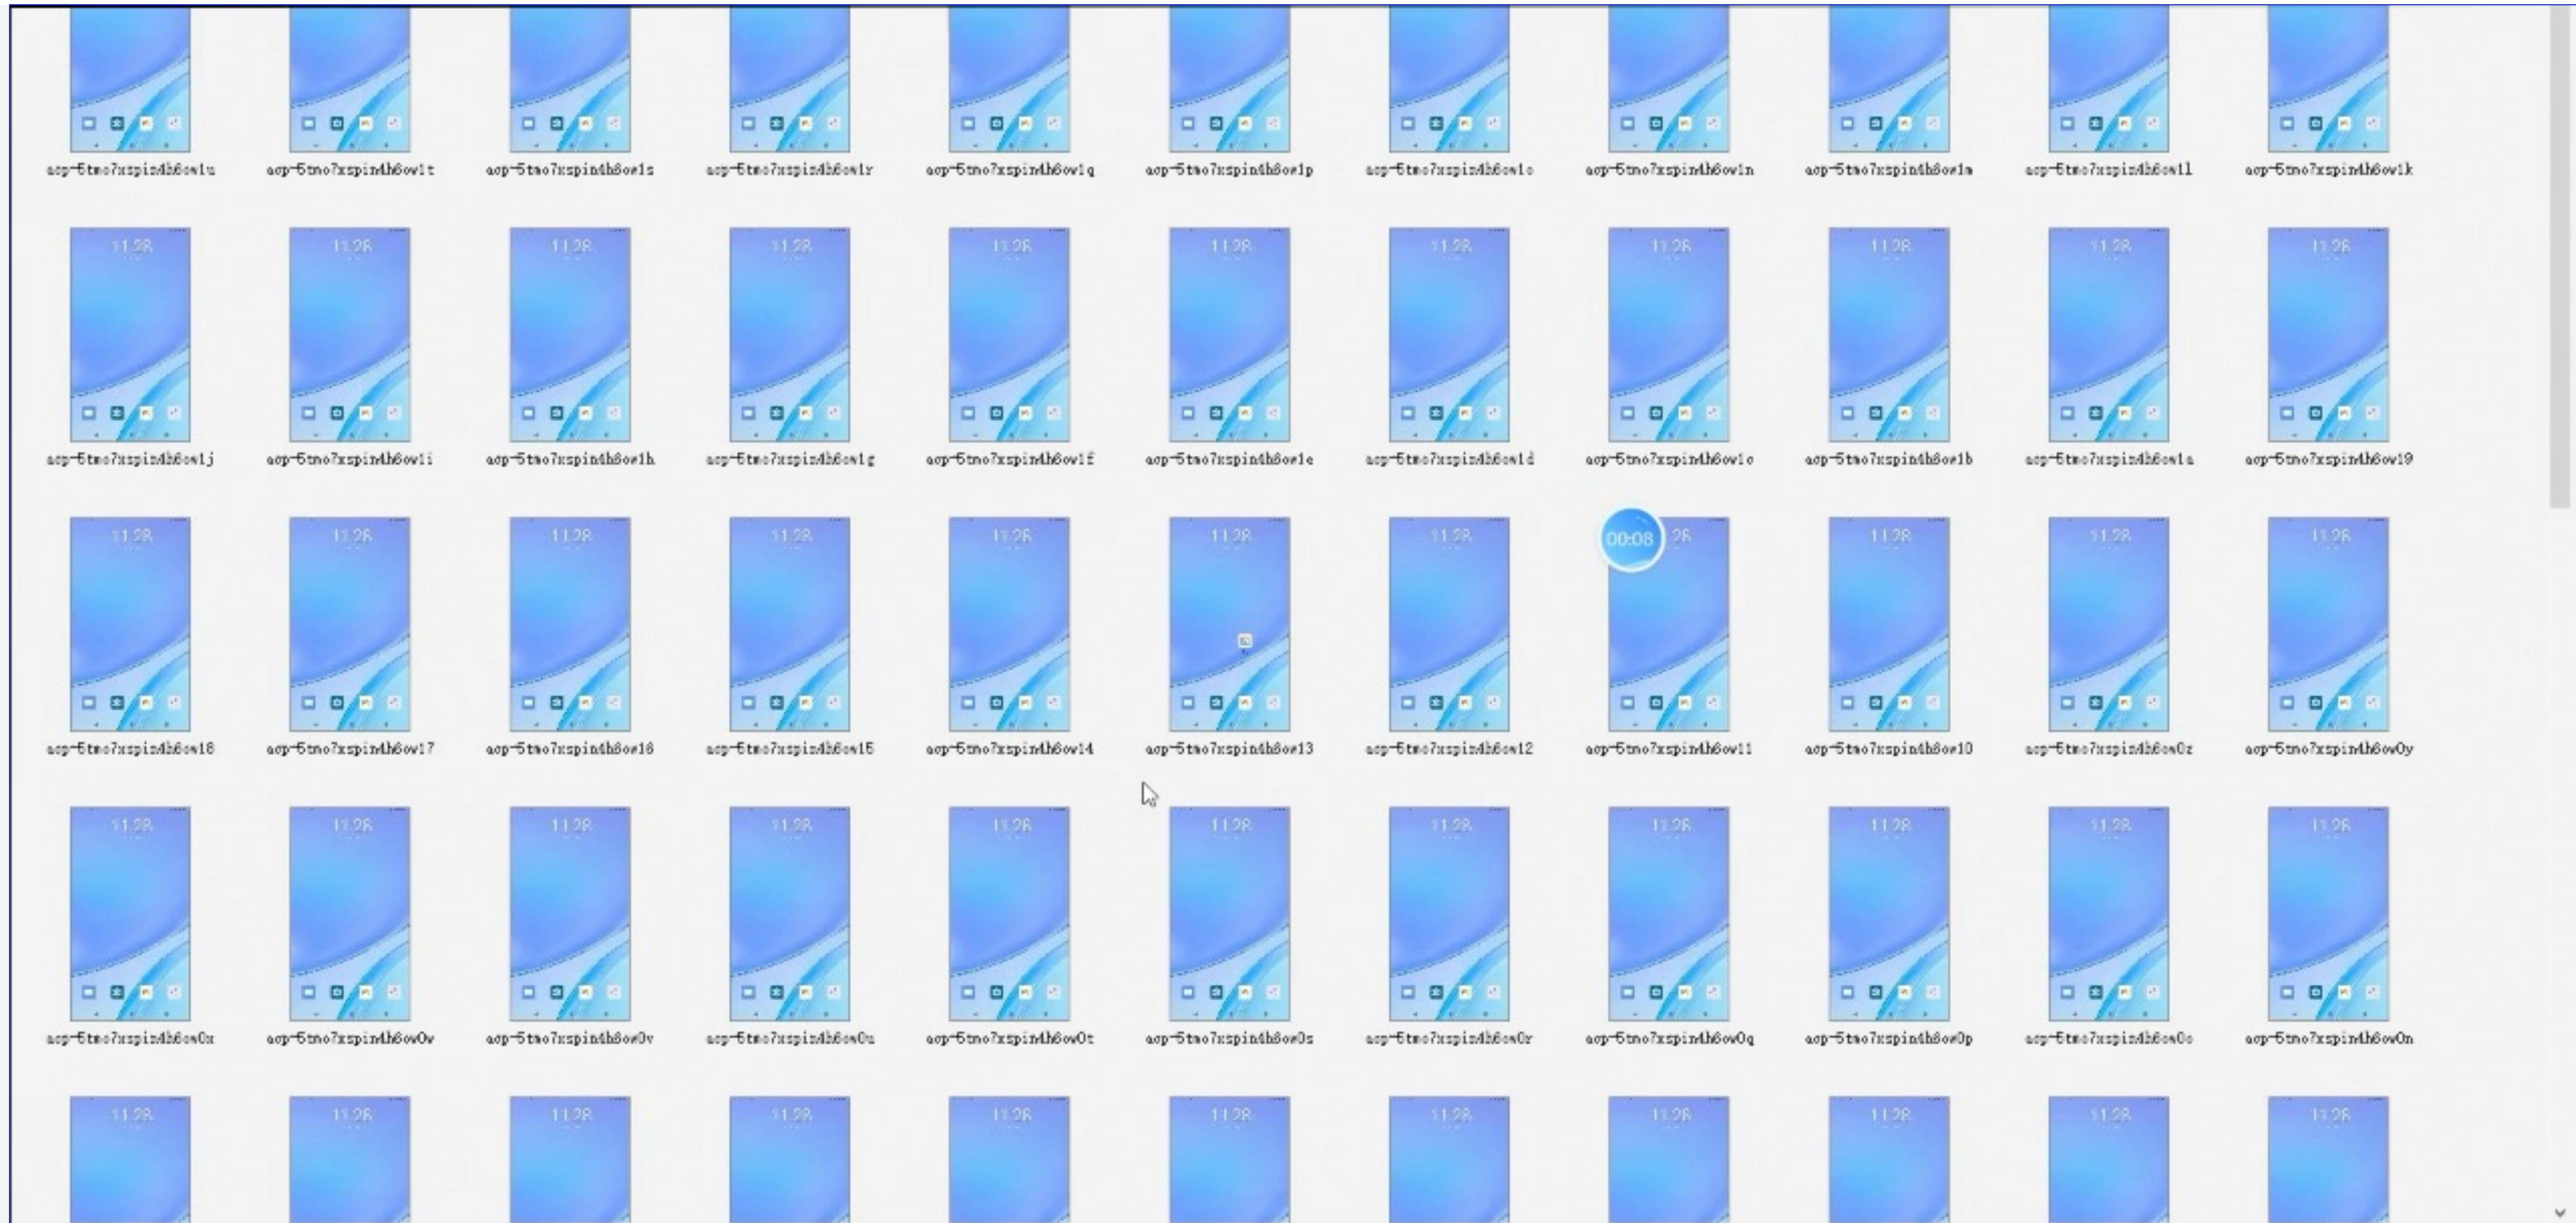

Easy to Use: Cluster Management to Improve Operational Efficiency

阿里云智能集团
ALIBABA CLOUD INTELLIGENCE GROUP

无影

Provides an SDK for managing clusters to improve operational efficiency.

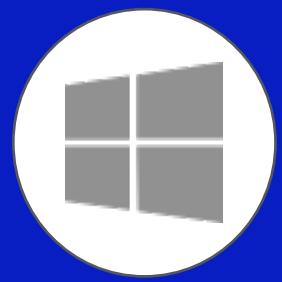

Open: Multiple Clients and Access Methods to Meet Diverse Scenario Needs

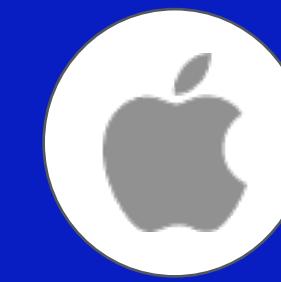

阿里云智能集团
ALIBABA CLOUD INTELLIGENCE GROUP

无影

Supports multiple clients and access methods to meet customer needs in diverse business scenarios. Supported clients include PC, mobile, web, and hardware terminals. Supported connection and operation methods include console, API, SDK, and ADB.

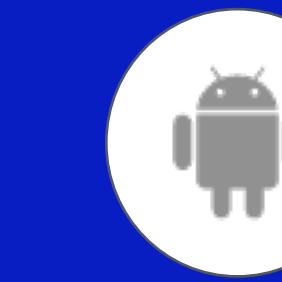

Windows

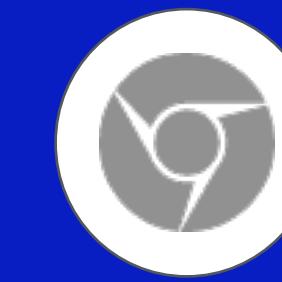

Mac

iOS

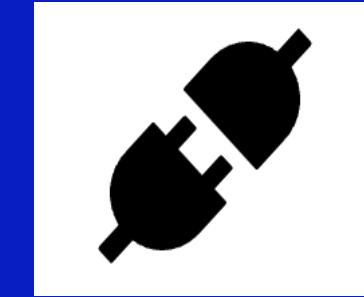

Android

Web

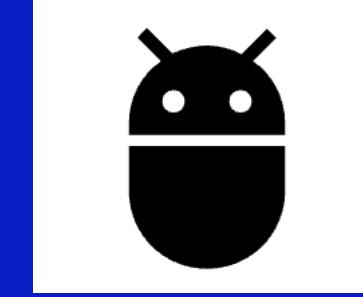

Console

API

SDK

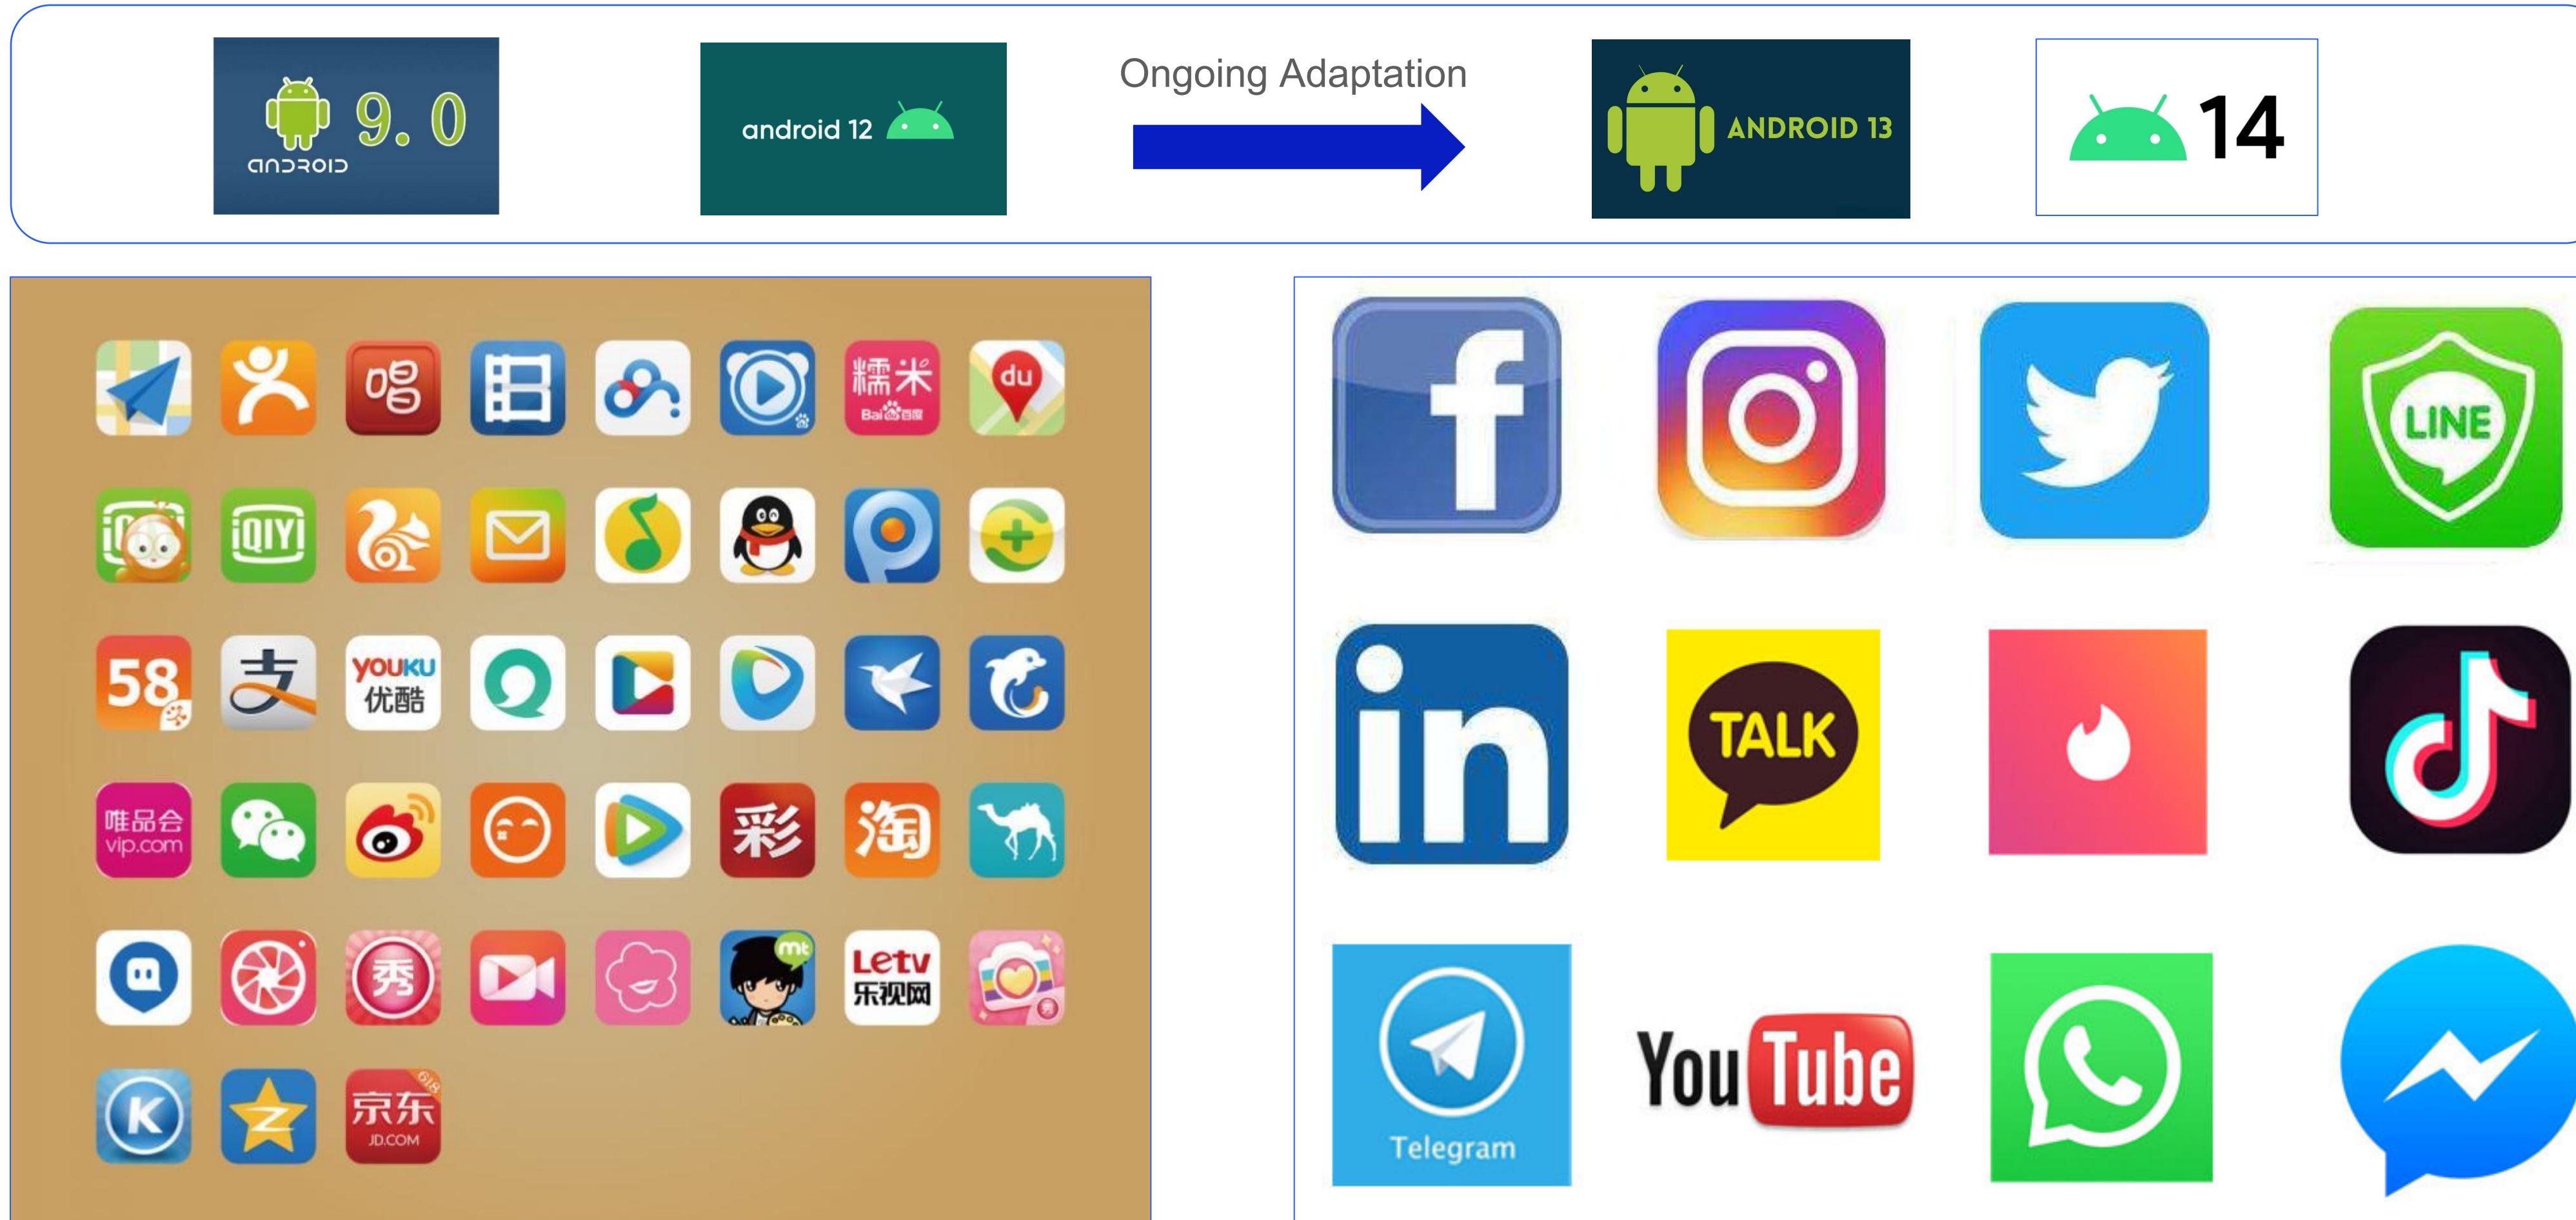

ADB

Open: Compatibility with Mainstream Apps in the Android Ecosystem

阿里云智能集团
ALIBABA CLOUD INTELLIGENCE GROUP

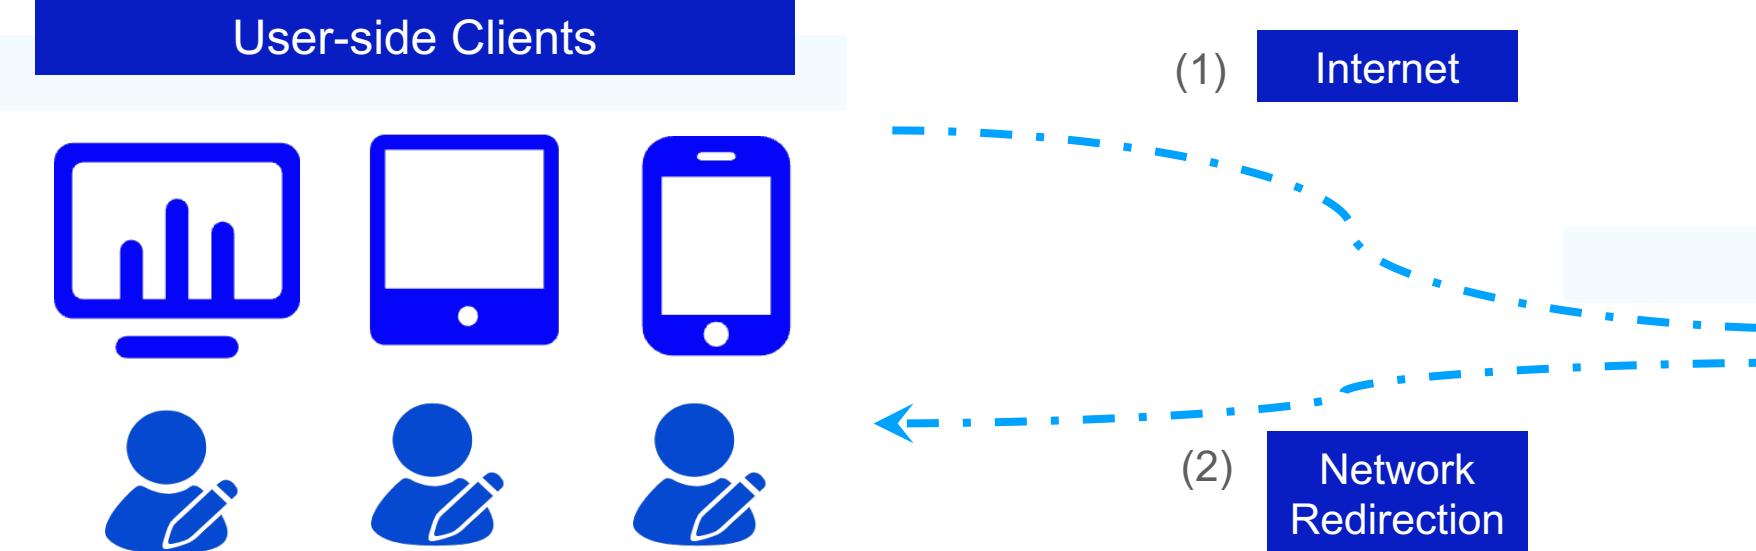

无影

Supports Android 9 and Android 12 images, with ongoing adaptation to Android 13 and Android 14 images.

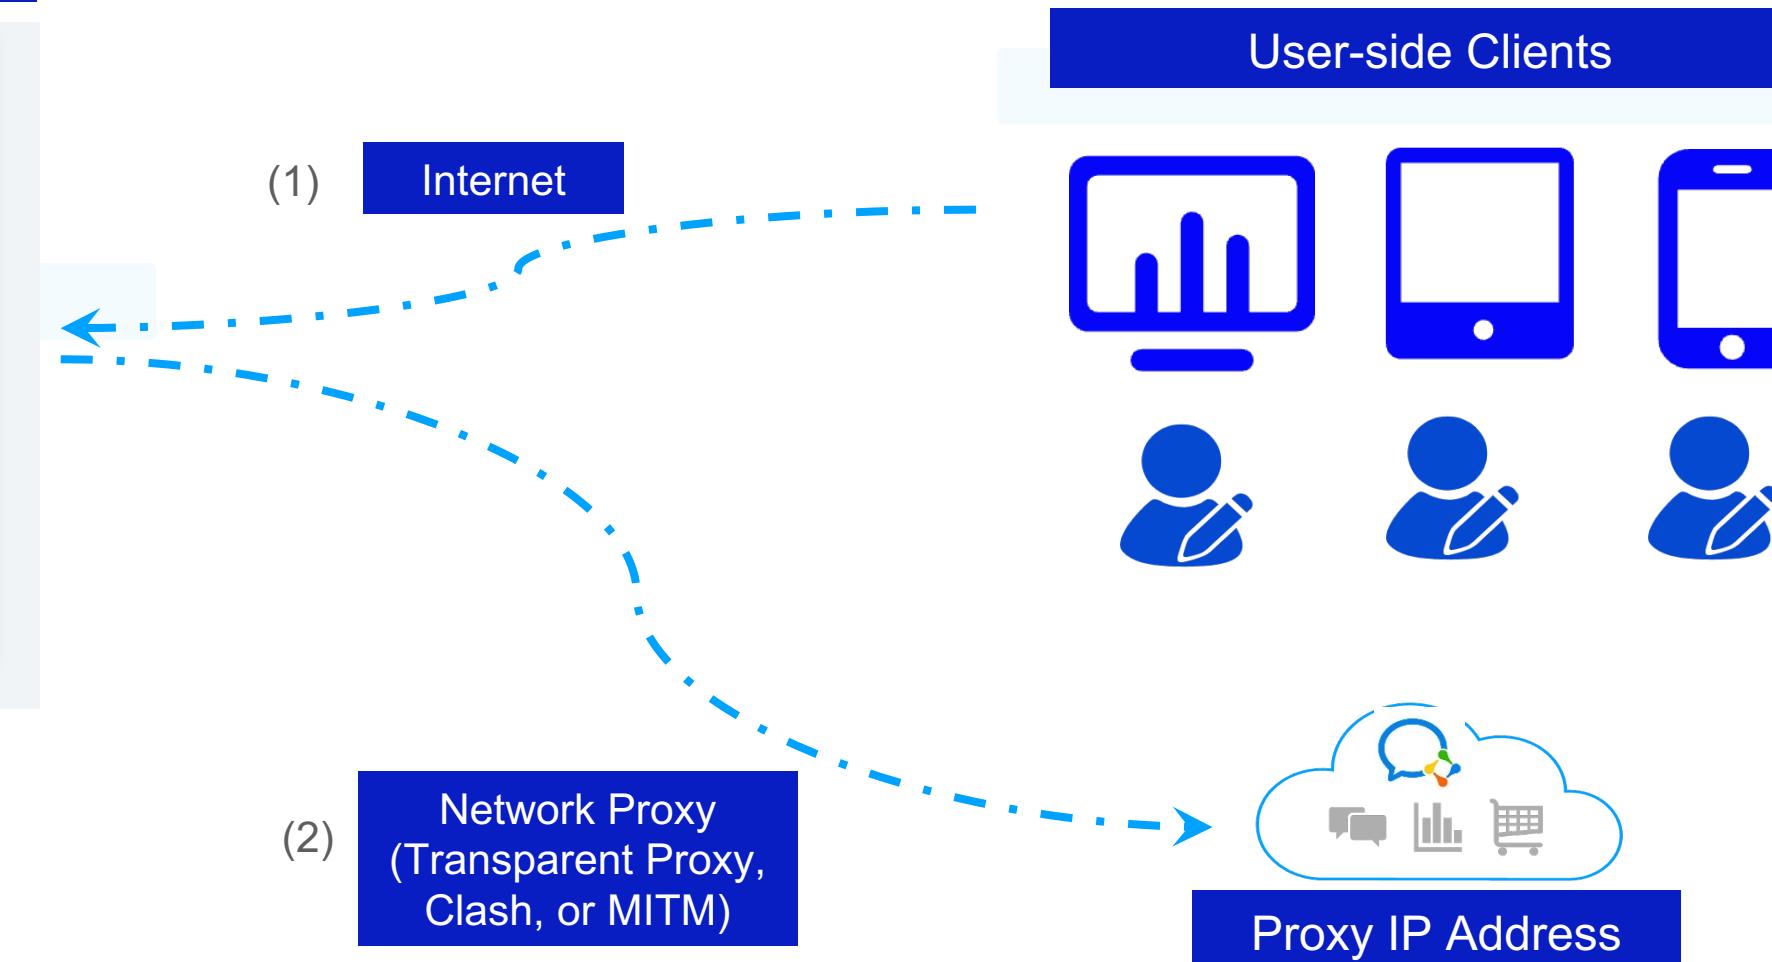

Flexible: Network Redirection and Flexible IP Configurations

Network Redirection

Flexible IP Configurations

Network redirection has two typical use cases:

1. To determine whether an app's network control is dependent on IP addresses, the network redirection feature can be enabled to replace the IP address of the data center with the IP address of a client. If the app changes from an abnormal state to a normal state, it can be confirmed that the app is affected by IP address-based network control.
2. Network redirection supports a one-to-N pattern. If network redirection is enabled on a Cloud Phone instance, other Cloud Phone instances can use this instance as their network egress, thereby reducing client-side resource consumption.

For scenarios such as community operations and advertising that require third-party IP addresses, flexible IP proxying can be achieved by using methods such as transparent proxies, Clash, or MITM.

Flexible: Comprehensive Real Device Simulation

Sensors:
Accelerometer, magnetic_field, rotation_vector, light, and pressure

Hardware properties:
ID (Android ID and Wi-Fi MAC address)
SysProp (serialno, hardware, product, and build)
GPU (vendor, name, and version)

Tools:
Send Notification, Cancel Notification, HTTP Get Test, Restart Zygote, and Ping Test

Configurations:
Root permissions, system UI (status bar and navigation bar), background process cleanup, one-click device migration, virtual location, virtual battery level, and app guard

Phone properties:
LAC/CID, SimState, Imei, Meid, SubscriberID, DeviceID, and NetworkOperator

Smooth: Proprietary Streaming Protocol with Weak Network Resilience and Scenario Adaptation

阿里云智能集团
ALIBABA CLOUD INTELLIGENCE GROUP

无影

Resistant to jitter (jitter: 150 ms):
Video playback remains smooth.

Resistant to packet loss (packet loss rate: 30%):
Audio playback latency is less than 300 ms, ensuring clear and continuous calls.
Video playback remains smooth with a freeze rate of approximately 5.4%, compared with a competitor product's freeze rate of about 16%.

Resistant to bandwidth throttling (less than 2 Mbit/s):
Video playback remains normal with a freeze rate less than 3% and no screen blurring or artifacts.

Weak Network Resilience

Counteracts packet loss, jitter, and insufficient bandwidth to adapt to unstable public network environments.

Bandwidth Prediction

Multiple Transmission Protocols

Congestion Control

Scenario Adaptation

Adapts to user operation scenarios, balancing smoothness and clarity.

Audio and Video Scenarios
Audio MOS > 4.0
Audio Latency < 170 ms

Social Scenarios
PSNR: 50+ dB

Cloud

Other Features

No.	Feature	Description
1	More economical	Supports free interaction traffic between clients and Cloud Phone instances. Provides a free shared Internet bandwidth of 5 Mbit/s.
2	More secure	Provides comprehensive security control policies based on the cloud security system of Alibaba Cloud, and supports VPCs and security groups.
3		Provides multiple backup options, including full-device backup, app backup, and file backup.
4	More convenient	Supports virtual cameras, virtual microphones, clipboard sharing, adaptive screen resolution, and multi-touch event handling.
5		Supports card-style status display for Cloud Phone instances.
6		Supports resource monitoring at both the instance level and instance process level.
7	...	Continuously increasing.

THANKS
